

SECURITY TEST (VAPT) ATTESTATION

Dear M/S: Tejasvi Business Solutions

Date: 05-10-2026

This is to attest that Codesecure Solutions completed a Vulnerability Assessment and Penetration Test (VAPT) engagement for Tejasvi Business Solutions. The engagement covered the following application:

Name: CA Task Pro
Web URLs: <https://cataskpro.com/>
Platform: Web App
Version: 1.0.0
Timeline: 17-09-2026 - 05-10-2026
Test Type: Grey-box (authenticated + unauthenticated)
Report ID: CSS-VAPT-2026-123

The assessment combined automated scanning with manual penetration testing, aligned with industry frameworks including the OWASP Top 10, OWASP ASVS, PTES, and NIST SP 800-115. Findings were rated using CVSS v3.1 across standard severity bands.

All vulnerabilities identified during the engagement were shared with Tejasvi Business Solutions and have since been remediated. Codesecure Solutions performed a verification retest and confirms that the identified issues have been resolved, with no issues from the assessment remaining open. Detailed technical findings are documented in the confidential assessment report and are intentionally excluded from this letter.

This attestation reflects the application's security posture as of the assessment and captures its state at the time of testing only. No system can be guaranteed 100% secure, as new vulnerabilities emerge continuously. A re-assessment is recommended upon material changes, major releases, or periodically, alongside secure coding practices and continuous monitoring, to maintain this posture against evolving threats.

For Codesecure Solutions,

Authorized Signatory
